8. Settings
9. Help, self-test and feedback
10. Updates
11. Extensions and developer mode
12. Keyboard shortcuts
13. Troubleshooting
14. Versions and secrets

1. Install

The installer. It asks whether to install just for you (no admin rights) or for all users in Program Files (admin).

From a terminal (one line)

```
Windows (PowerShell):
irm https://raw.githubusercontent.com/mishuk-11/platinum-reader/main/install.ps1 | iex

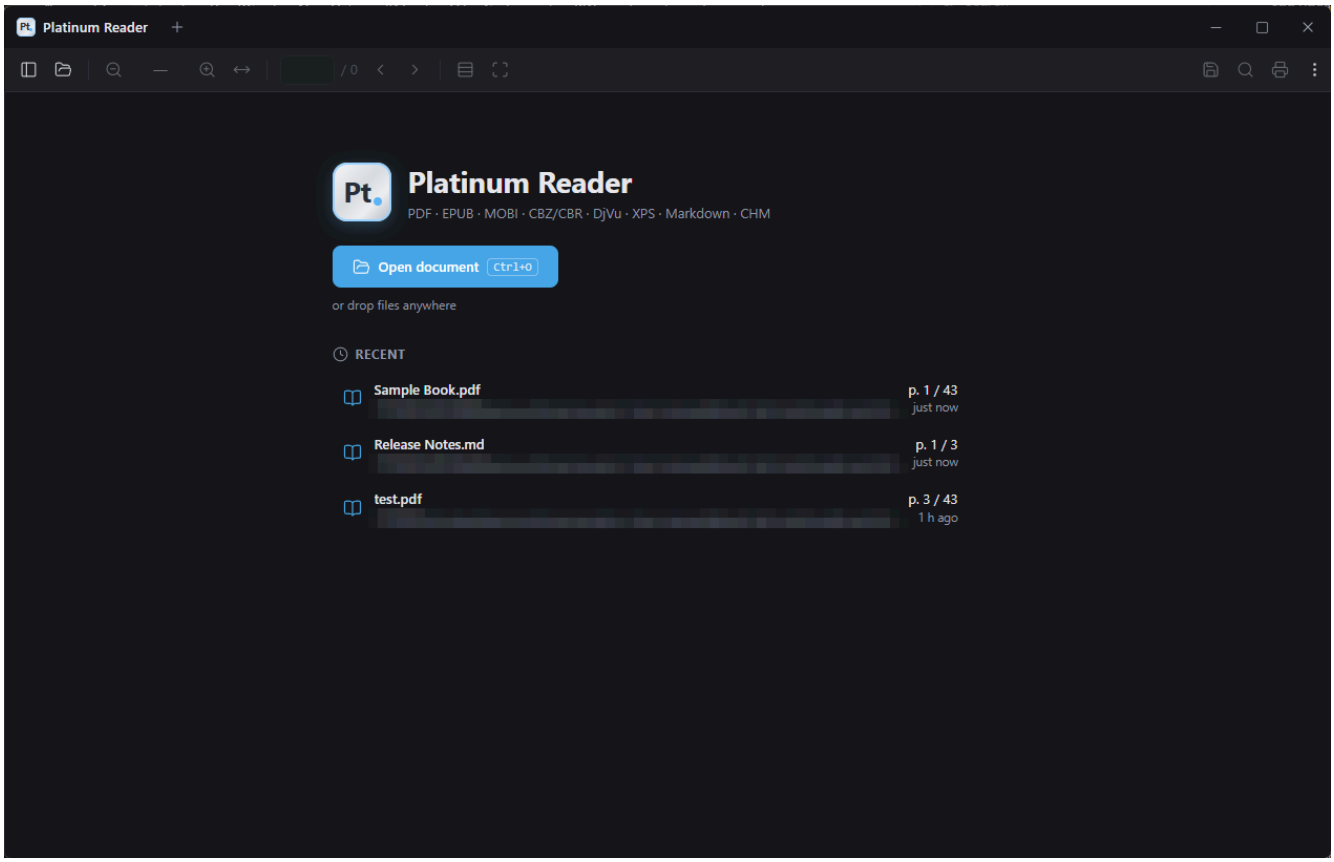

Linux / macOS:
curl -fsSL https://raw.githubusercontent.com/mishuk-11/platinum-reader/main/install.sh | sh
```

Both download the newest release from GitHub and check its SHA-256 checksum before installing. Silent installs: `setup.exe /S /CurrentUser` or `setup.exe /S /AllUsers`. All commands are in `install-commands.txt`.

Make it your default reader

Settings → **Make Platinum Reader the default…** opens Windows' Default apps page. Choose Platinum Reader for each file type. Windows 11 only lets *you* pick defaults; once you do, files show Platinum Reader's minimal type icons (PDF, EPUB, MD, …).

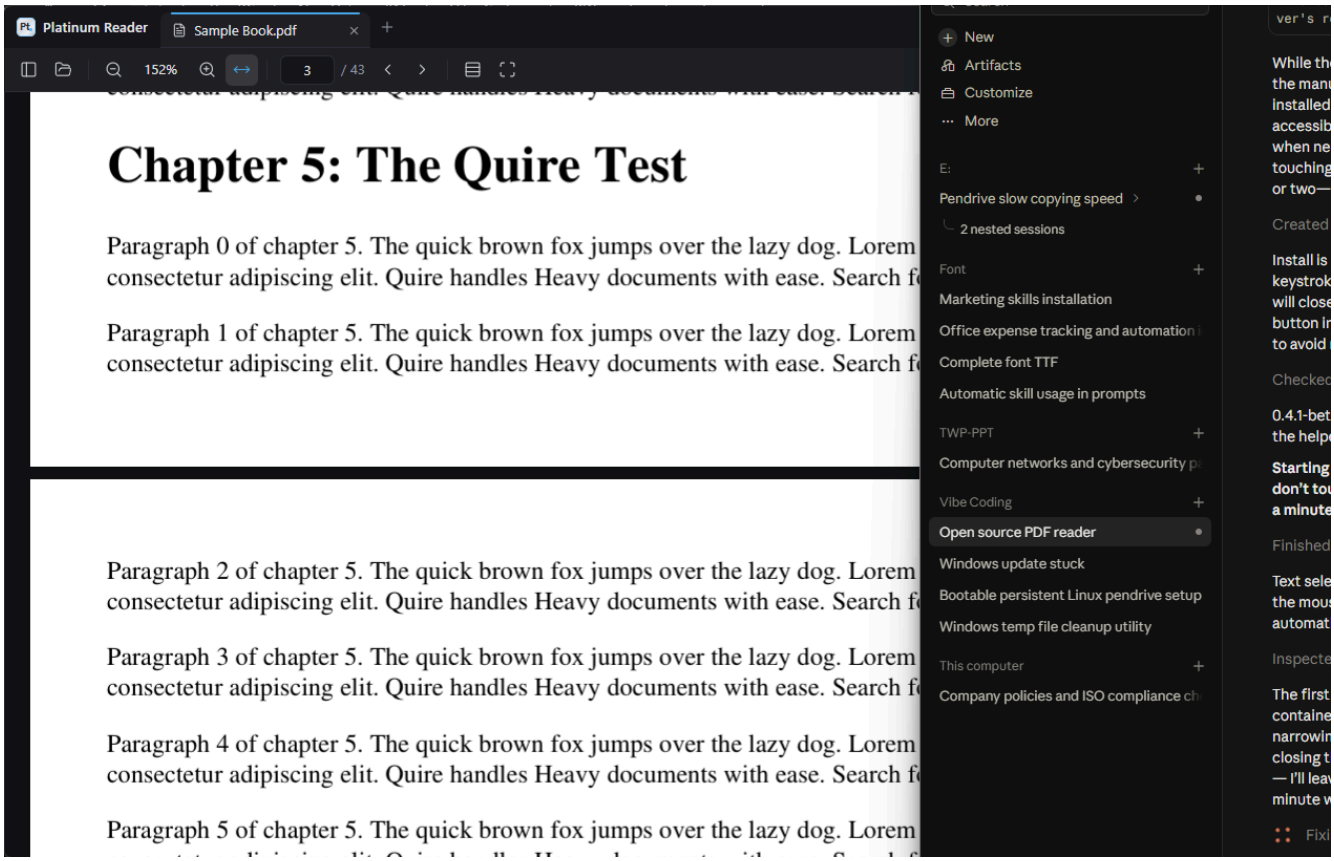

2. Getting started

Home: open a document, drop files anywhere, or reopen a recent one at the page where you stopped.

- **Open:** `Ctrl+O`, the Open button, drag and drop, or double-click a file in Explorer.
- **Recent:** every document reopens at your last page. Press and hold a recent item for 3 s to preview its first page.
- **Tabs come back:** open tabs are restored the next time you start (Settings → Reading).

3. Reading

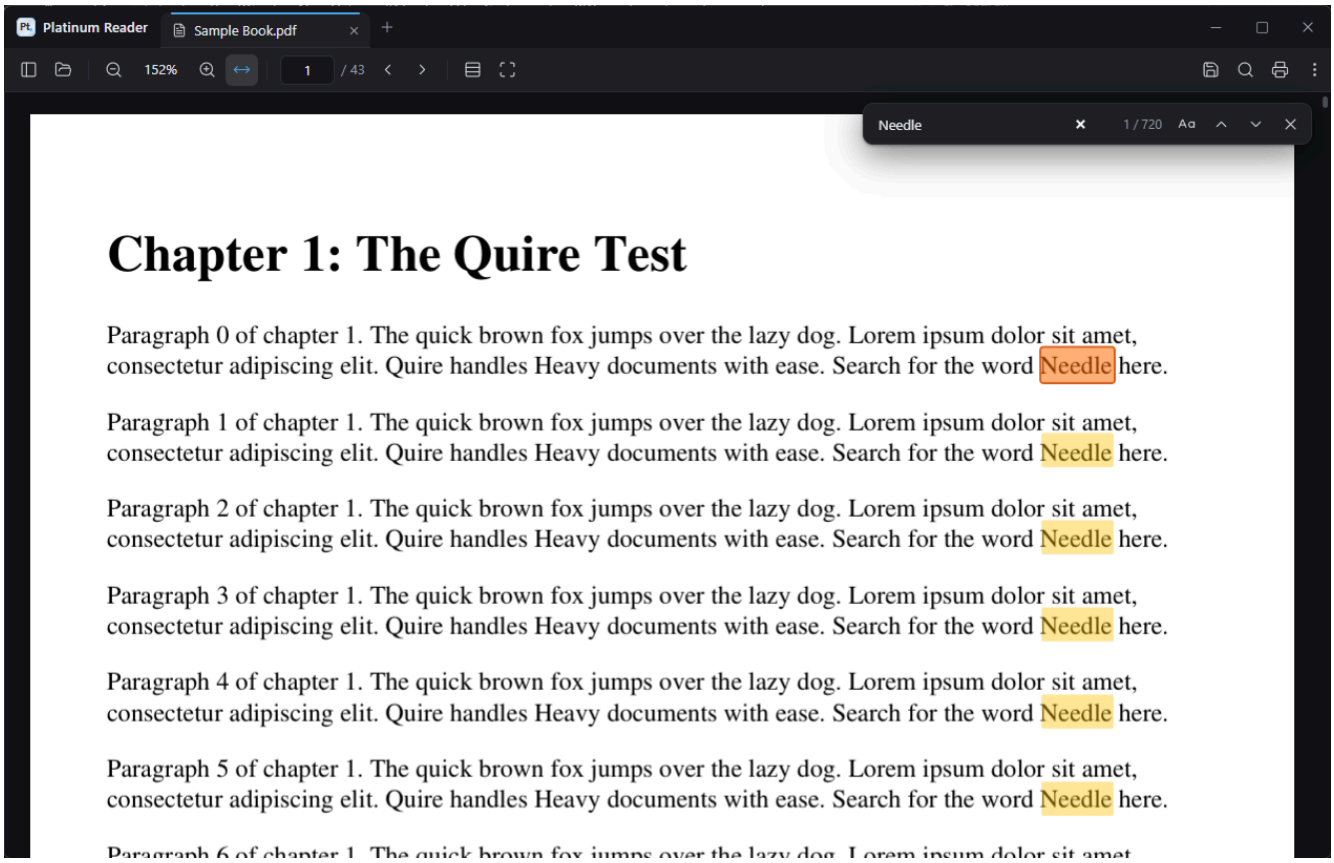

The reading view with the tab bar and toolbar.

Toolbar	What it does
Outline	Table of contents sidebar (`Ctrl+B`).
– 100% +	Zoom out / presets / zoom in. `Ctrl`+mouse wheel also zooms.
↔	Fit width.
Page box	Shows the current page. Click it, type a number, press `Enter` (`Ctrl+G`).
View mode	Continuous scrolling, facing pages, or single page.
Full screen	`F11`: one page at a time, nothing else on screen. `Esc` to exit.
Save	Writes your highlights into the PDF (`Ctrl+S`). Lights up when there are unsaved changes.

Find · Print ·	Search, print (`Ctrl+P`), and the main menu.

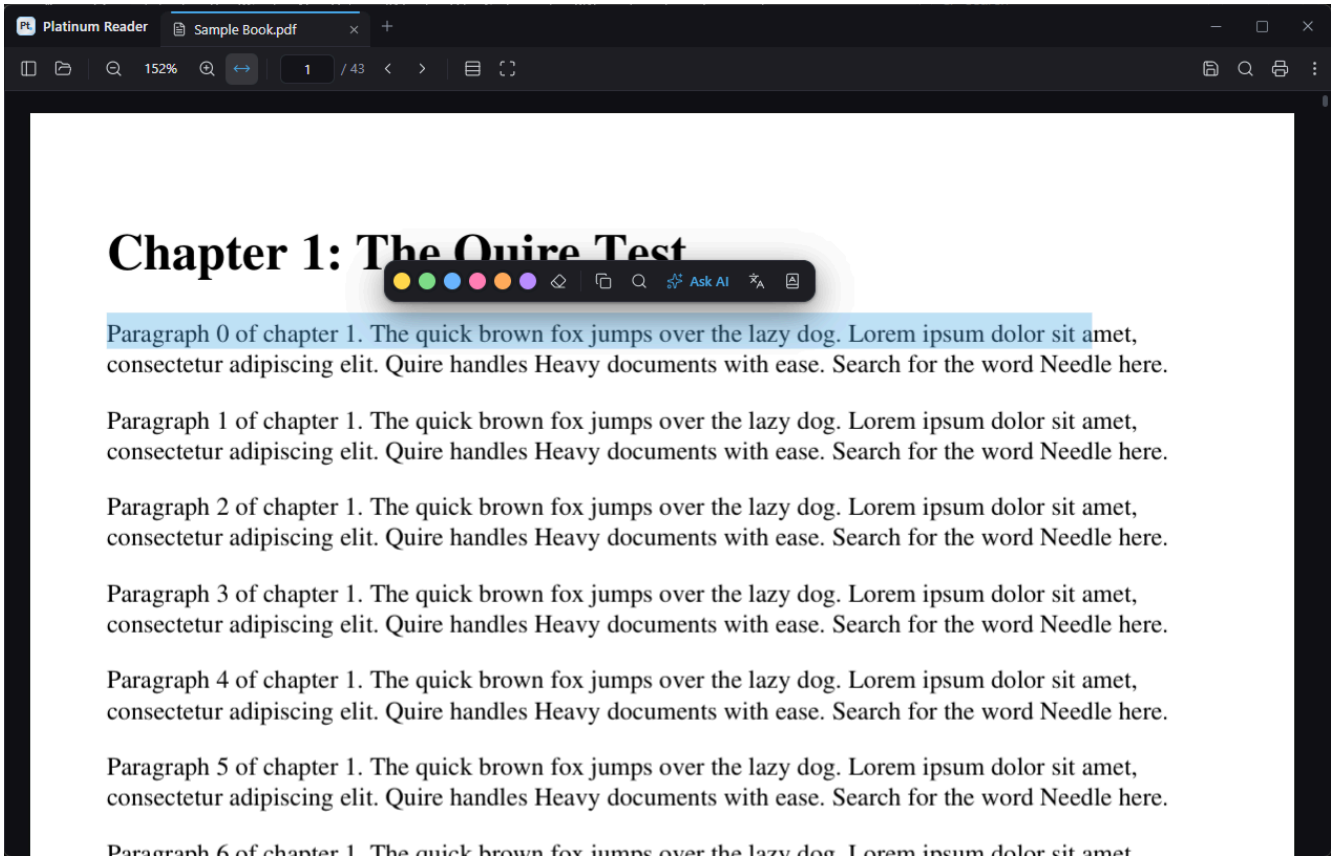

4. Find

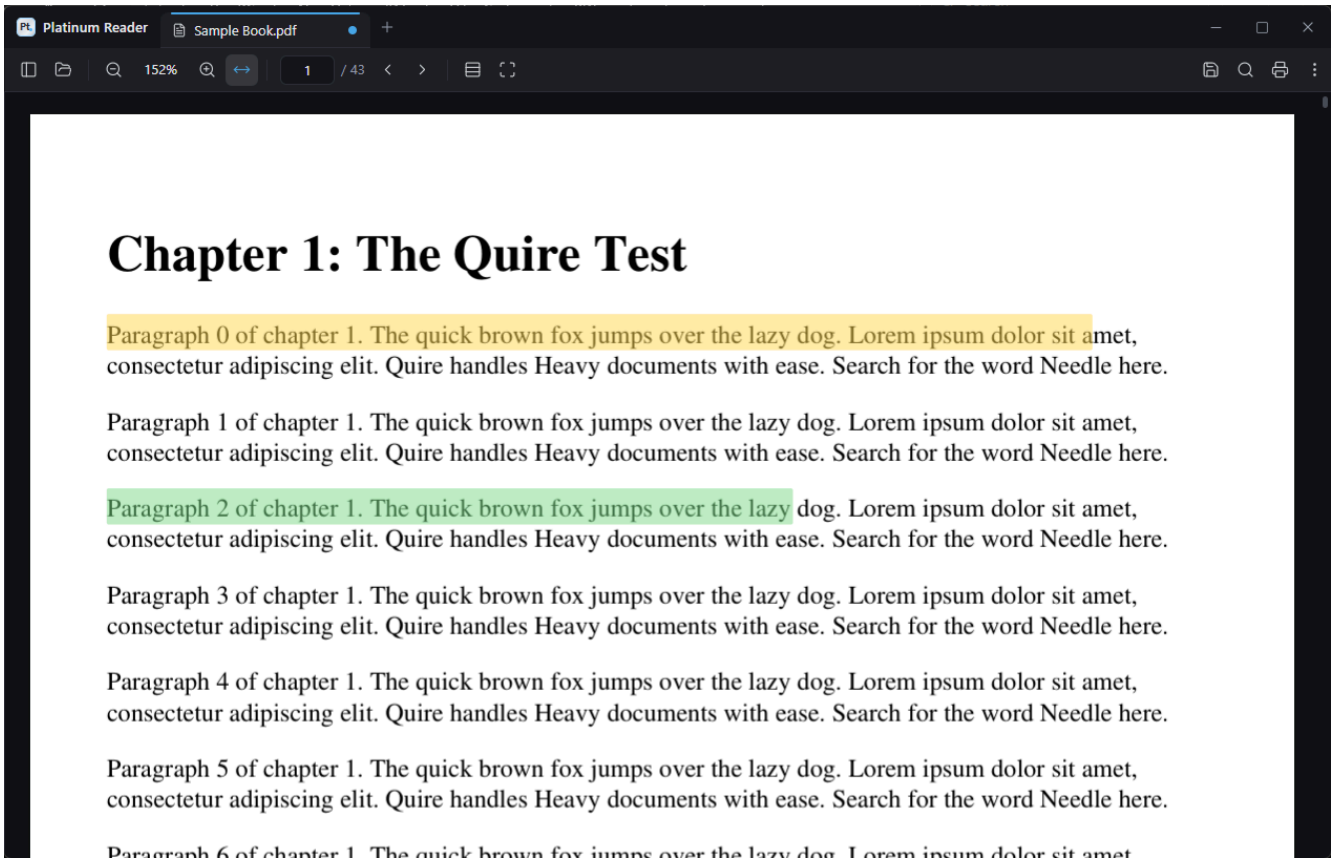

Every match is highlighted; the current one is orange. The counter shows “1 / 720”.

- `Ctrl+F` opens the bar. `Enter` / `Shift+Enter` or the arrows move between matches.
- **Aa** turns on match case.
- Highlights from Find are temporary and disappear when you close the bar.

5. Highlights, unhighlight and saving

Select text and a floating menu appears: 6 highlight colors, the eraser, copy, web search, Ask AI, Translate and Define.

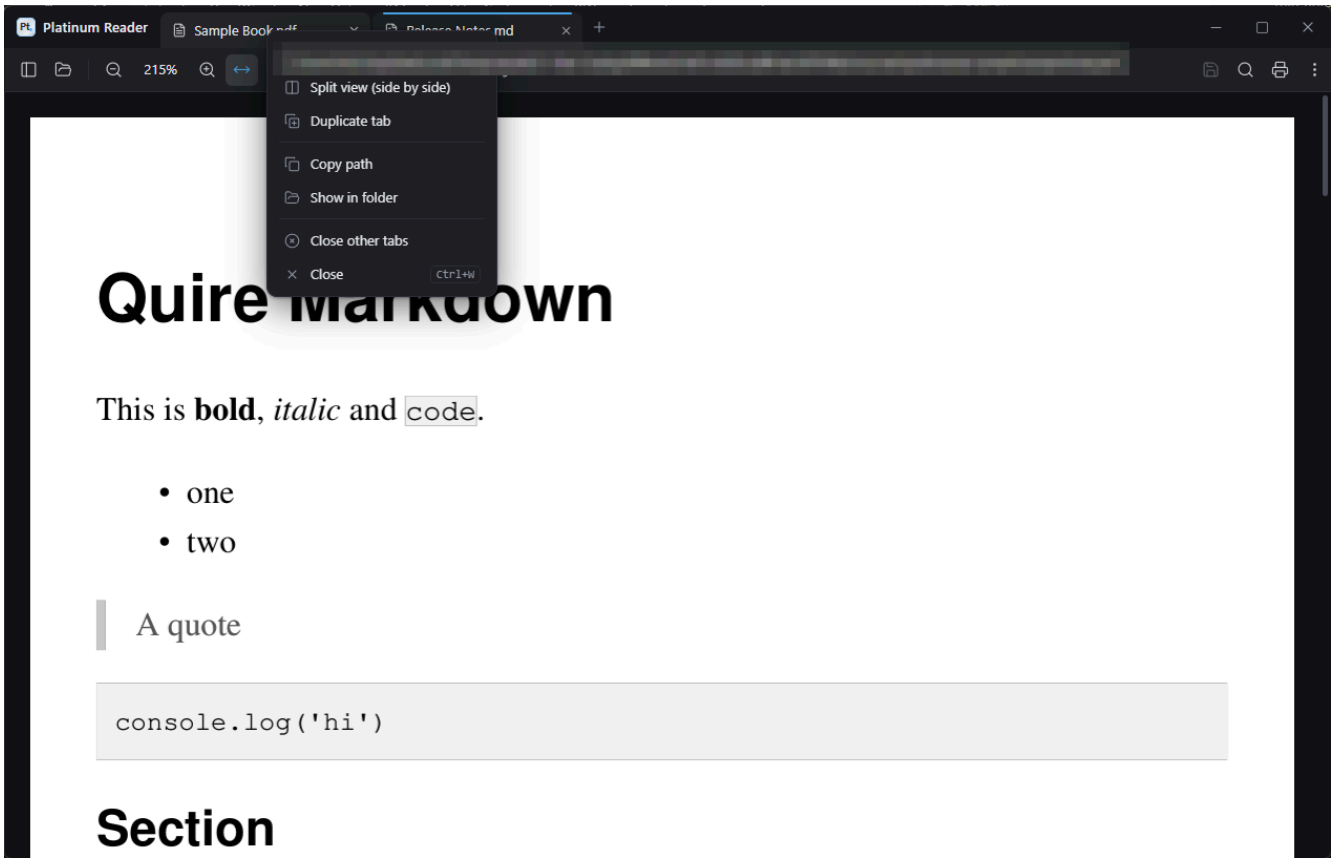

Highlights in yellow and green. The blue dot on the tab means “not saved into the file yet”.

- **Highlight:** select text, pick a color.

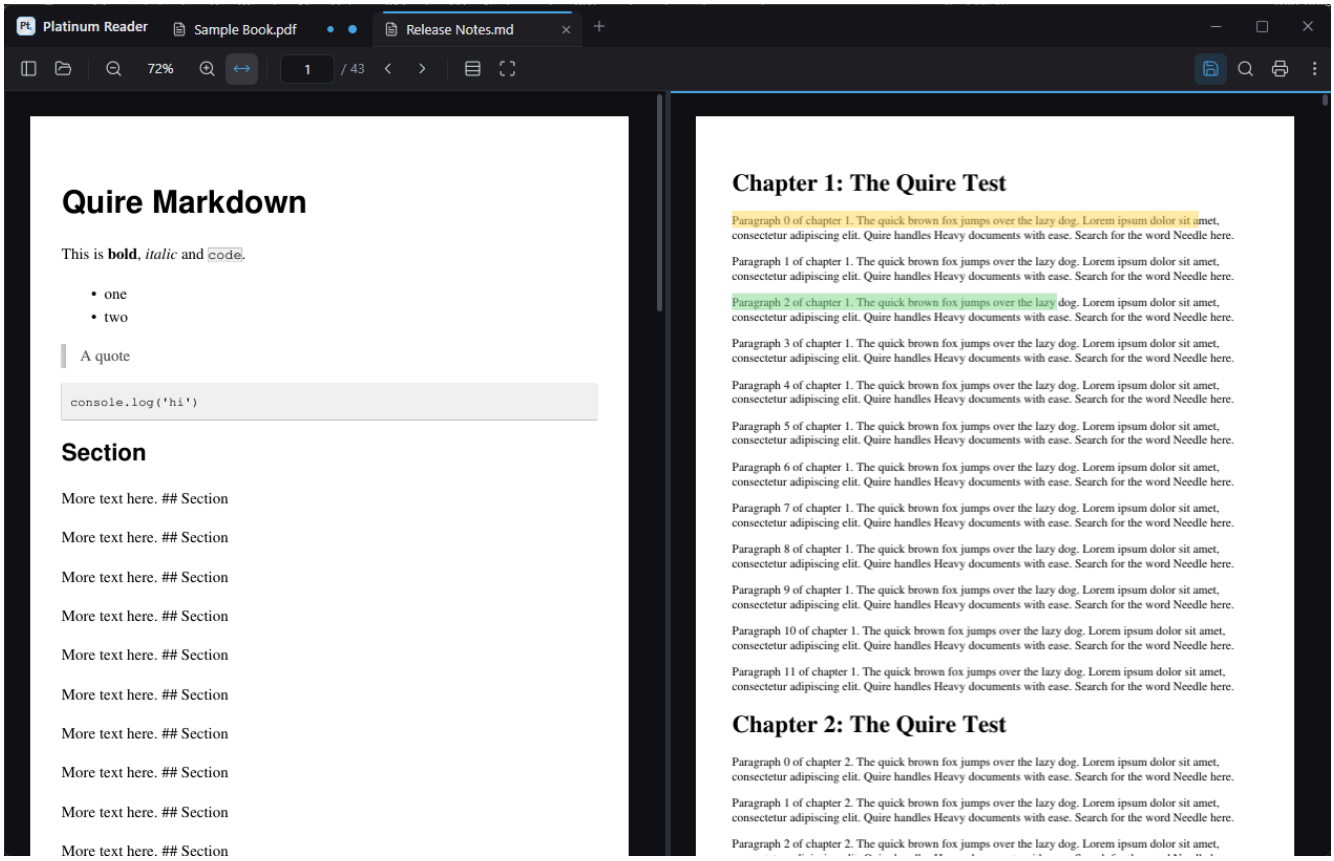

- **Unhighlight:** select highlighted text and click the eraser. It also removes highlights already saved inside the PDF. You can also click a highlight to remove it.
- **Save** (`Ctrl+S`): writes your highlights into the PDF as real highlight annotations, so other PDF readers show them too.
- **Save as** (`Ctrl+Shift+S`): writes a new PDF and keeps the original untouched.
- Closing a tab or the window with unsaved changes asks: **Save**, **Don't save** or **Cancel**.

> Only PDFs can be saved. In EPUB, MOBI, comics and other formats your highlights are kept by Platinum Reader itself.

6. Tabs, split view and windows

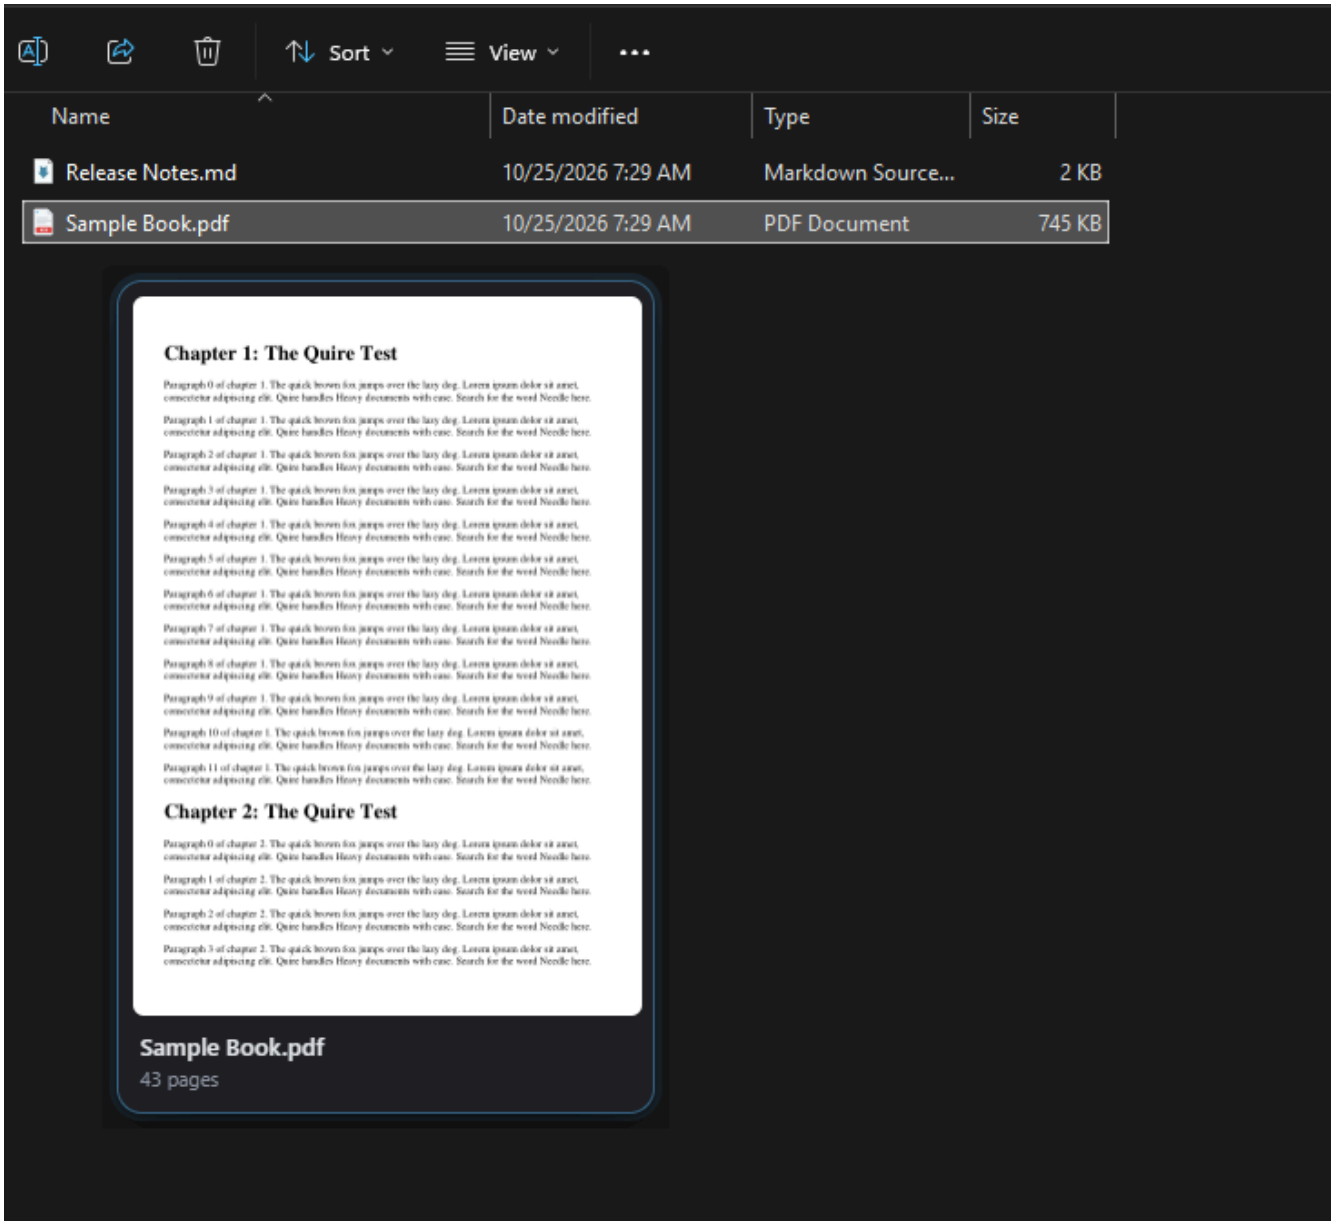

Right-click a tab for more options.

Split view: two documents side by side, each with its own zoom and page. Drag the divider to resize.

- **Open in new window** moves a tab into its own window.
- **Duplicate**, **Copy path**, **Show in folder**, **Close others**.
- Drag tabs to reorder. Middle-click closes. `Ctrl+Tab` switches, `Ctrl+1…9` jumps.
- Settings → Layout → **Tab bar position: Left** gives vertical tabs.

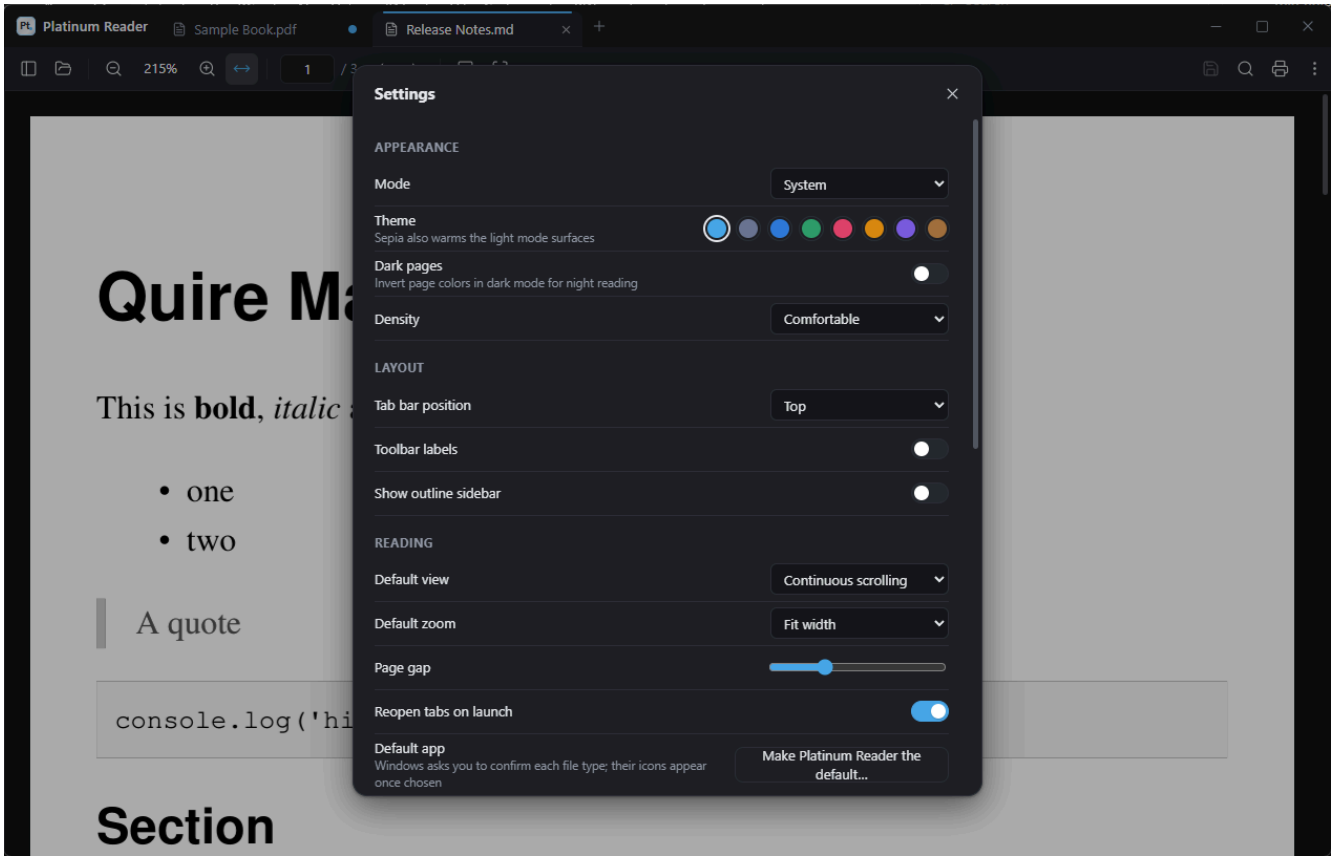

7. Hold to preview

In File Explorer: press and hold a PDF for 3 seconds without moving, and its first page appears. Let go and it’s gone.

- Works in File Explorer, on the desktop, and inside the app (tabs, Recent, History).
- It runs in the background: the reader doesn’t need to be open. A tiny helper starts when you sign in.
- Turn it off in Settings → Reading. The helper stops within 5 seconds and no longer starts at sign-in.
- Keep the mouse still: moving more than a few pixels is a drag, just like in Explorer.

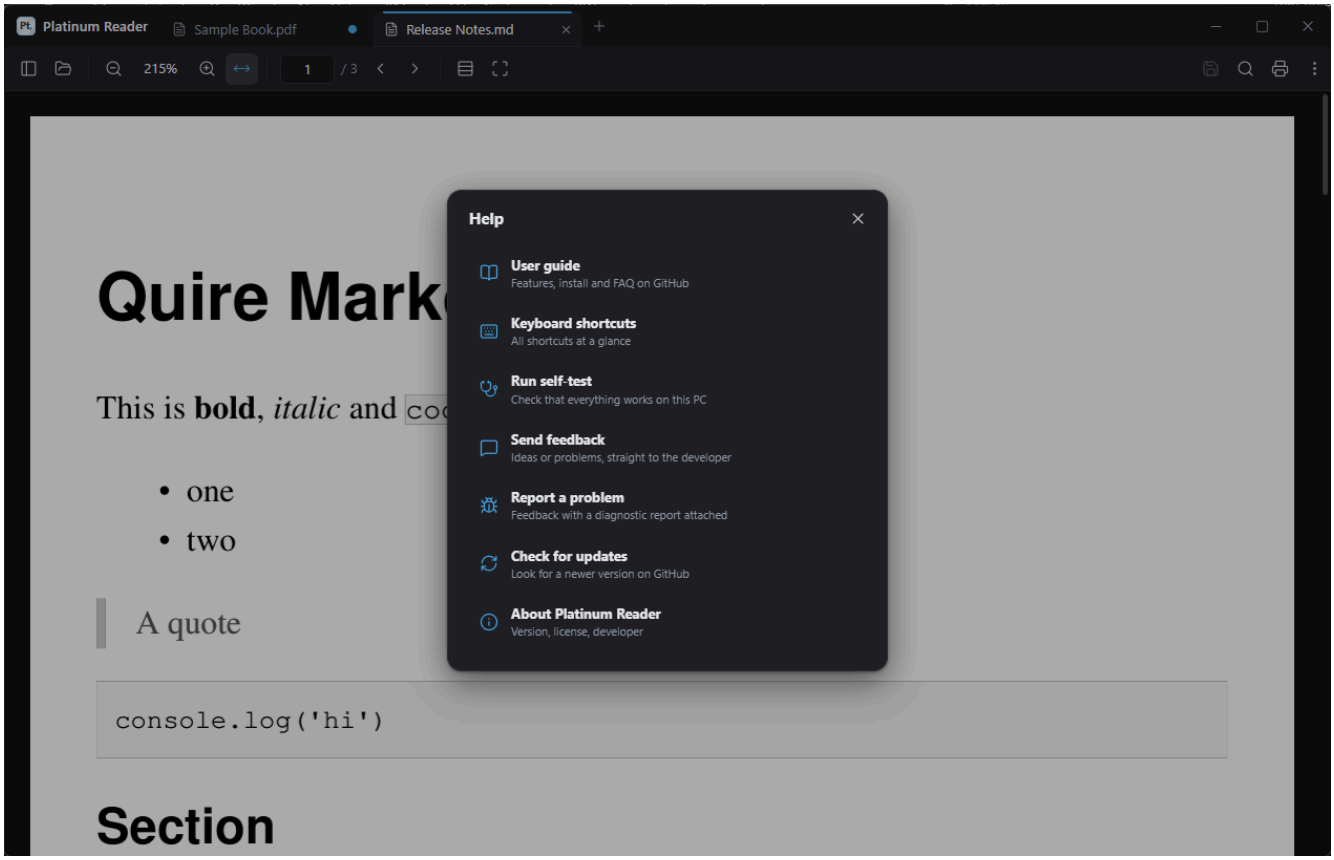

8. Settings

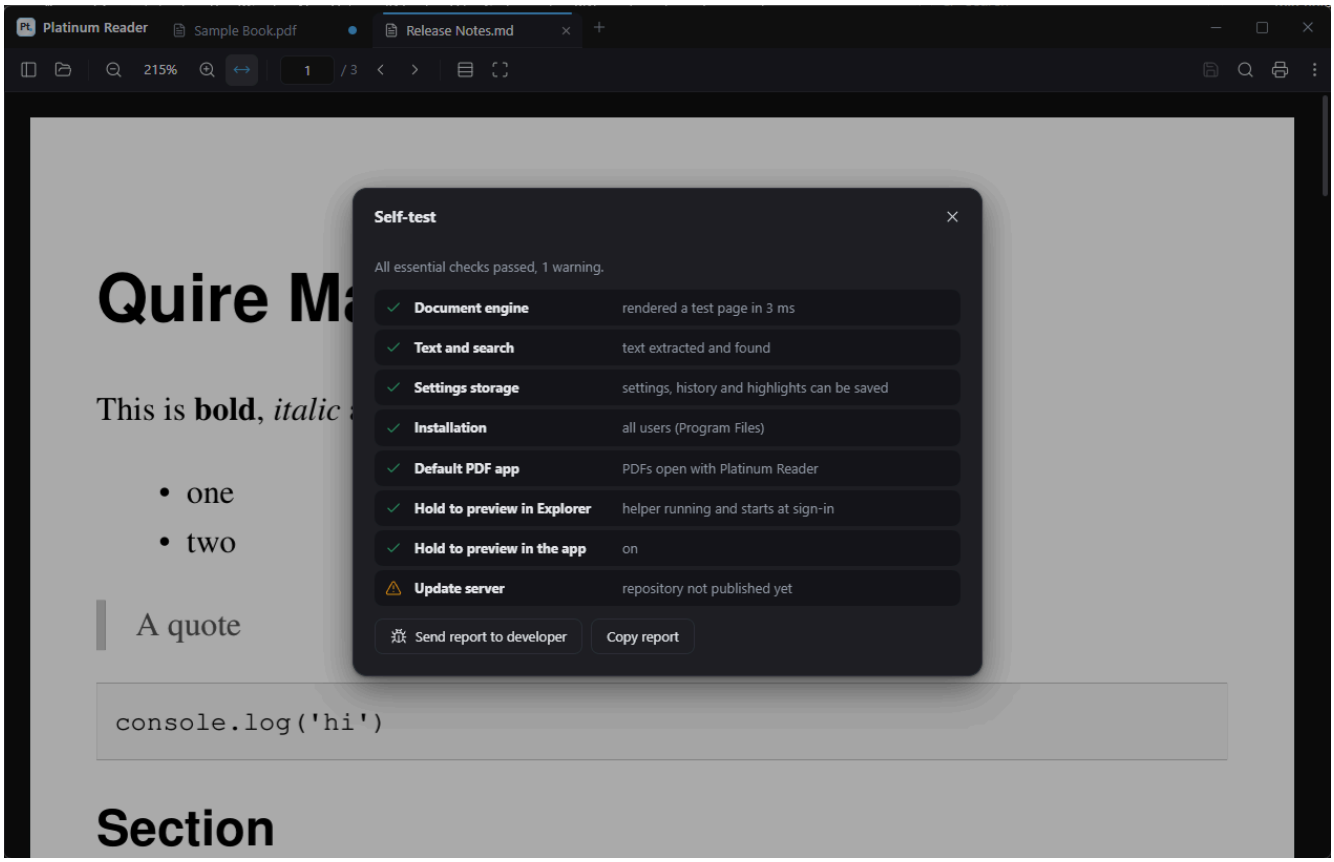

Settings (`Ctrl+,`).

- **Appearance:** light / dark / system, 8 accent themes (Platinum, Graphite, Ocean, Forest, Rose, Amber, Violet, Sepia), dark pages for night reading, density.
- **Layout:** tabs on top or left, toolbar labels, outline sidebar.
- **Reading:** default view and zoom, page gap, reopen tabs, hold to preview, default app.
- **Web:** which AI and search engine the selection menu uses.
- **Updates**, **Extensions** and **Developer** sections.

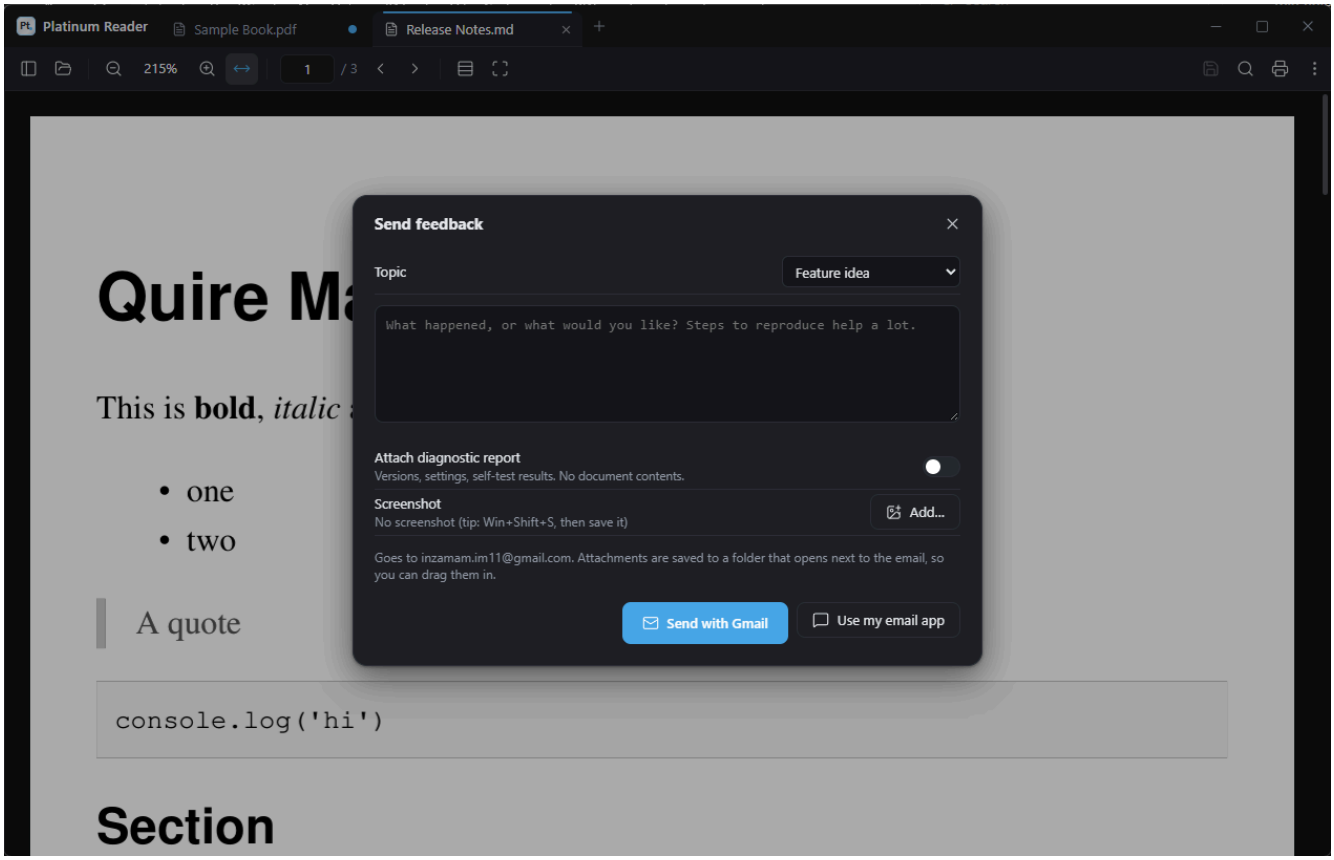

9. Help, self-test and feedback

→ Help, or `F1`.

The self-test checks the engine, search, storage, installation, default app, the background helper and the update server.

Send feedback: pick a topic, write a message, optionally attach the diagnostic report and a screenshot.

- **Send with Gmail** opens Gmail in your browser, addressed to the developer with the subject “Needs Pt. Reader: <topic>”. **Use my email app** uses your installed mail program.
- Attachments are saved to a folder that opens next to the email. Drag them into the message.
- The diagnostic report contains versions, settings and self-test results, never your documents’ contents.

10. Updates

- Platinum Reader checks GitHub Releases at launch and once a day, and always asks first.
- **Update now** downloads, verifies the SHA-256 checksum and runs the installer. Or **Download installer**, or **Copy terminal command**.
- Pause with **Remind me in 7 days**, **Skip this version**, or turn automatic checks off in Settings → Updates.

11. Extensions and developer mode

- Built-in extensions: Translate, Dictionary, Word count, Reading progress. Switch them in → Extensions.
- Add your own `.js` extension to add selection buttons, menu items and document hooks. See `EXTENSIONS.md`.
- Settings → Developer mode: performance overlay, text-layer view, render quality, parallel renders, DevTools, diagnostics, reset.

12. Keyboard shortcuts

Keys	Action	Keys	Action
`Ctrl+O`	Open	`Ctrl+S`	Save highlights
`Ctrl+Shift+S`	Save as	`Ctrl+W`	Close tab
`Ctrl+N`	New window	`Ctrl+Tab`	Next tab
`Ctrl+F`	Find	`Ctrl+G`	Go to page
`Ctrl+B`	Outline	`Ctrl+H`	History
`Ctrl+,`	Settings	`F1`	Help
`Ctrl+P`	Print	`F11`	Full screen
`Ctrl +` / `−`	Zoom	`Ctrl+0`	Fit width

13. Troubleshooting

Problem	Fix

Files show a blank icon	Choose Platinum Reader as the default for that type (Settings → Make Platinum Reader the default…). Windows 11 only shows an app's icons for types you assigned to it.
Hold to preview does nothing	Run the self-test (`F1`). "Hold to preview in Explorer" should pass. Keep the mouse completely still for 3 s. Search results and some cloud folders aren't supported.
Send with Gmail shows a login page	Sign in to Gmail in your browser, or use "Use my email app".
Update check says "not published yet"	Normal until the first public release is on GitHub.
Something else	`F1` → Report a problem. It includes everything the developer needs.

14. Versions and secrets

Version	Codename	Highlights
0.5.0-beta	DonutDino	(fill in the highlights)
0.4.3-beta	BabyKoala	(fill in the highlights)
0.4.2-beta	BabyKoala	First public release on GitHub: one-line install, publisher name, no extra helper window, About icon showdown
0.4.1-beta	Honeybee	Save / Save as into PDF, unhighlight, styled installer, manuals, test kit

0.4.0-beta	Honeybee	File-type icons, Help, self-test, feedback
0.3.0-beta	Carrotbunny	Renamed to Platinum Reader, hold to preview, updates, Program Files install
0.2.0	FairyRocket	Extensions, developer mode (as Quire)
0.1.0	Cherry Lava	First release (as Quire)

Every codename hides a little surprise in → About. Try pressing and holding things there, clicking the developer's name more than ten times, or typing a certain bee's favourite word while reading.

Platinum Reader is open source (AGPL-3.0). Developed by Inzamam Islam · github.com/mishuk-11 · inzamam.im11@gmail.com
